SUMMARY

Software Engineer focused on building backend, cloud, and AI-enabled products using Python, FastAPI, React, Next.js, AWS, Docker, and LLM APIs. Experienced in shipping full-stack applications, scalable APIs, AI workflows, and cloud deployments with strong ownership in fast-moving technical environments.

EDUCATION

Bachelor of Computer and Information Sciences, Harrisburg University

Expected May 2027

Relevant Coursework: Data Structures, Algorithms, Operating Systems, Computer Networks, Cloud Computing, Software Engineering

TECHNICAL SKILLS

Programming	Python, Java, C++, Go, JavaScript, SQL
Frontend/Backend	React.js, Next.js, HTML, CSS, FastAPI, REST APIs, GraphQL, mobile app prototyping
Databases	MySQL, PostgreSQL, DynamoDB
AWS/Cloud	EC2, Lambda, VPC, S3, RDS, ELB, IAM, CloudWatch, Amplify, AppSync, DynamoDB
DevOps/Tools	Git, Docker, GitHub Actions, Linux, Terraform, Kubernetes basics, Agile workflows
AI/Systems	LLM APIs, RAG, embeddings, prompt engineering, output evaluation, TCP/IP, DNS, HTTP/S, load balancing

CERTIFICATIONS

AWS Certified Solutions Architect – Associate | AWS Certified Developer – Associate

EXPERIENCE

Quantum Technology Intern

May 2026 – Present

SE&M Solutions LLC – SE&M Quantum Storm Initiative

On-site / Hybrid

- Support Android and iOS mobile application development for EMS-powered technology solutions through front-end prototyping, QA testing, and sandbox validation.
- Prototype and present an EMS-powered mobile application concept while benchmarking QRNG and EMS performance to document technical findings and implementation feasibility.

Full Stack Developer Intern

Jan 2024 – May 2024

Heir Atlas

Remote

- Supported a Java-based production application on AWS, resolving 50+ issues across application, database, and Linux environments.
- Reduced incident resolution time by 25% by creating structured runbooks and repeatable debugging workflows.
- Strengthened system security with VPC security groups and IAM least-privilege policies while improving Stripe payment reliability by 20%.

Code Sensei (Programming Instructor)

Mar 2023 – Aug 2023

Code Ninjas

Mechanicsburg, PA

- Taught programming and debugging fundamentals to 30+ students through structured lessons and hands-on problem solving.

PROJECTS

ResumeAI Hub – Deployed LLM Resume Analysis Platform

resumeaihub.com

- Built and deployed a full-stack AI resume analysis platform using FastAPI, React/Next.js, OpenAI APIs, RAG, Docker, AWS EC2, Nginx, and Vercel.
- Implemented retrieval-augmented resume analysis using embeddings and vector search to ground job-resume matching, feedback generation, and tailored output recommendations.
- Engineered modular backend API workflows for resume parsing, job description analysis, scoring logic, reusable service components, and reliable concurrent request handling.
- Evaluated outputs across prompt structures and retrieval strategies to improve consistency, relevance, and end-user usefulness.
- Integrated production-oriented deployment workflows using GitHub Actions, Terraform-based provisioning, HTTPS routing, and CloudWatch monitoring.

ConnectNest – Cloud-Based Campus Engagement Platform (AWS)

- Developed a scalable full-stack campus engagement platform using React, AWS Amplify, AppSync, DynamoDB, and S3 to support real-time posts and event workflows.
- Designed GraphQL APIs and subscription-based update pipelines to support concurrent user activity, low-latency synchronization, and cloud-based data workflows.
- Built cloud workflows using IAM-based access controls, CI/CD pipelines, and CloudWatch monitoring to improve reliability and secure system behavior.

AWS Two-Tier Networked Application (VPC / EC2 / RDS)

- Designed and deployed a secure two-tier AWS architecture using VPC, EC2, RDS, load balancing, subnets, routing tables, and security groups.

Universal Chat Application (Swift + AWS)

- Built a real-time chat application with automated translation, Dockerized backend services, and AWS EC2 deployment within a secure VPC.
